

## ENVIRONMENTAL POLICY

Falcon Metals (Falcon) is committed to minimising its impact on the environment.

To achieve this Falcon will:

- Ensure awareness of environmental impact is fundamental to Falcon's business strategy
- Provide the required resources to establish and maintain a system that allows effective monitoring and measurement of our environmental impact
- Comply with all appropriate laws and regulations related to the environment
- Enable all personnel to carry out their duties with environmental impact at the forefront of their actions and decision making
- Continually review all aspects of its operation on a site-specific basis with the purpose of reducing our impact on the environment
- Ensure it rehabilitates areas of disturbance promptly at a level consistent with, or in excess, of any regulatory requirements
- Provide an environment of openness both internally with its staff and externally within the community, and in other businesses and organisations.

The Falcon board is ultimately responsible for achieving the environmental objectives, however everyone at a Falcon operation takes responsibility for their impact on the environment.
